CC This sequence encodes a rat type I iodothyronine 5' deiodinase.

This

CC sequence was used as a probe in the isolation of the human type I
 CC iodothyronine 5' deiodinase gene. The isolated gene contains in the
 3'

CC untranslated region a sequence which causes inclusion of seleno-
 cysteine

CC residues at a TGA codon within the deiodinase gene. The product of
 the

CC human gene and antibodies reacting with it, are useful in the
 diagnosis

CC and treatment of disease states related to thyroid function. Mutant
